Subject:

In re: 09543407 Sequence seardh

Please search SEQ ID NO: 5 and please run an oligmer search on SEQ ID NO: 5.

I also need interference searches run.

Thanks!

Vanessa L. Ford

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Salmonella enteritidis AgfA amino acid sequence SEQ ID NO:5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAB36341;
           The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA segmence which encodes a foreign epitope or antigen. Also described are: segmence which encodes a foreign epitope or antigen. Also described are: segmence which encodes a foreign epitope or antigen. Also described are: segment of thin aggregative fimbriae (SEF17/MAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia comprising recombinant agreement agraes and agfAr homologue fabrians in subunits, respectively: (2) of the homologues species; (3) directing recombinant gene into the chromosome of the homologues species; (3) directing recombination of a recombinant gene:
                                                                                                                                                                                                              Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal
                                                                                                                                                                                                                                                                                                                                                                                   05-APR-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                05-APR-2000; 2000WO-CA00356

comprising separating an amino acid polymer comprising a recombinant of AgfA protein containing a replacement segment or segments of foreign comprising sequence or sequences grown on a Salmoneila, E. coli or comprising a recombinant of containing a replacement segment or segments of foreign comprising a recombinant of foreign containing a replacement segment or segments of foreign containing an introducing the composition of the expression of recombinant AgfA protein which is useful composition an immune response in an animal. In a fimbrial presentation composition the heterologous antigens are presented in high numbers (up to composition to the hybrid fimbrial protein possesses both the communogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong communogenic, which may be important for directing an immune response communogens, which may be important for directing an immune response communogens, which may be important for directing an immune response communogens, which may be important for directing an immune response communogens, which may be important for directing an immune response community to purify in large amount. The present sequence is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful CC useful for the expression of recombinant AgfA protein which is useful CC for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 coples/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong clauminogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and cliexpensive to purify in large amount. The present sequence is given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Best Local Similarity Matches 127; Conserv

cc directing recombination of a recombinant gene into the chromosome of the homologous species, replacing the native comprising separating an amino acid polymer comprising a recombinant cc comprising separating an amino acid polymer comprising a recombinant cc amino acid sequence or sequence syrown on a Salmonella, E. coli or cannot acid sequence or sequence grown on a Salmonella, E. coli or complymer into the animal in conjunction with a carrier or diluent. (I) is conjunct into the expression of recombinant AgfA protein which is useful comparising an immune response in an animal. In a fimbrial presentation conjunction with a carrier or diluent. (I) is conjunction with a carrier dimbrial protein possesses both the carrier dimbrial protein possesses both the carrier dimbrial subunit proteins are usually strong conjunction. The present of dimension in the carrier dimbrial protein possesses between the carrier dimbrial proteins are easy and conjunction with a carrier dimbrial present sequence is given in the carrier d

```
Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          05-APR-2000; 2000WO-CA00356
                                                                                                                                                                                                                                                                                                                                                                                   copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or enterplacement containing the Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is polymer into the expression of recombinant AgfA protein which is useful useful for the expression of recombinant AgfA protein which is useful useful for immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           White AP,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; Page 136; 139pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from virtually all other microbial organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents an agfA fragment encoded by an agfA gene fragment derived from Salmonella enteritidis 27655-3b InphoA mutant strain. The nucleic acid can be used to provide diagnostic assays for

immune response in animal

```
copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant of comprising a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or canterbacteriaceae host cell, from the host cell and introducing the Enterobacteriaceae host cell, from the host cell and introducing the conjumer into the animal in conjunction with a carrier or diluent. (I) is conjumer into the expression of recombinant Agfa protein which is useful cuseful for the expression of recombinant animal. In a fambrial presentation conjunction which a carrier or diluent. (I) is conjunction which is useful conjunction with a carrier or diluent. (I) is conjuncted to the heterologous antigens are presented in high numbers (up to copies/cell), the hybrid fambrin protein possesses both the carrier fambrial subunit proteins are usually strong conjunction, which may be important for directing an immune response capalist the inserted epitope, and hybrid fimbriae are easy and conjunction in the present sequence is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 10

(I) is polymer into the expression of recombinant AgfA protein which is useful useful for the expression of recombinant AgfA protein which is useful or eliciting an immune response in an animal. In a fimbrial presentation for eliciting an antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (but to copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the present of the present incorrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SERI7/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and escenbiraceae for the production of fimbriae comprising recombinant hapfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; Page 139; 139pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC assembly system of strains of Salmonella, Escherichia coli and C Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) CC directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene composed the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, CC comprising separating an amino acid polymer comprising a recombinant CC AgfA protein containing a replacement segment or segments of foreign CC amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the CC polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful CC for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to CC 500,000 copies/cell), the hybrid fimbria protein possesses both the carrier fimbrial subunit protein possesses both the CC immunogens, which may be important for directing an immune response can animal the inserted epitope, and hybrid fimbriae are easy and CC inexpensive to purify in large amount. The present sequence is given in the carmination of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                            ğ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cc directing recombination of a recombinant gene into the chromosome of the chomologous species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native cc back into the chromosome of the homologous species, replacing the native cc copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign cm anino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the colymer into the animal in conjunction with a carrier or diluent. (1) is cuseful for the expression of recombinant AgfA protein which is useful cor eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrial protein possesses both the carrier fimbrial subunit proteins are usually strong the immunogenes which may be imported for the subunit proteins are usually strong

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2000-672631/65.

AgfA::PT3#9 amino acid sequence SEQ ID NO:28

26-FEB-2001

(first entry)

```
cc segment of the gene has been replaced by a segment of a foreign DNA cc sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended cc assembly system of strains of Salmonella, Escherichia coll and cd affa, CsgA and AgfA-homologue fimbria subunits, respectively: (2) cc AgfA, CsgA and AgfA-homologue fimbria subunits, respectively: (3) cc AgfA, CsgA and AgfA-homologue fimbria subunits, respectively: (3) cc AgfA, CsgA and AgfA-homologue fimbria comprising recombinant gene cc back into the chromosome of the homologous species: (3) directing recombination of a recombination of firm a replacement of segments of foreign of a replacement segment or segments of foreign of a recombination of recombination with a carrier or diluent. (1) is of the presentation of recombination with a carrier or diluent. (1) is of the presentation of the presentation of fimbrian protein possesses both the or an endougle of the presentation of the present for directing an immune response of immunogenicity and adhesion properties relevant for an efficient live of the present segment of the present sequence is given in the beautiful of the present sequence is given in the beautiful of the present sequence is given in the pr

                                                       copy of that gene; and (4) eliciting an immune response in an animal. Copy of that gene; and (4) eliciting an immune response in an animal. Copy of that gene; and (4) eliciting an immune response in an animal. Comprising separating an amino acid polymer comprising a recombinant comprising separating a replacement segment or segments of foreign camino acid sequence or sequences grown on a Salmonella, E. coli or conjumer into the animal in conjunction with a carrier or diluent. (1) is colymer into the axpression of recombinant AgfA protein which is useful conjunction with a carrier or diluent. (1) is coliciting an immune response in an animal. In a fimbrial presentation conjunction with a carrier or diluent. (1) is coliciting an immune response in an animal. In a fimbrial presentation conjunction with the heterologous antigens are presented in high numbers (up to conjunction), the hybrid fimbrin protein possesses both the conjunction properties relevant for an efficient live reactine, the carrier fimbrial subunit proteins are usually strong communogens; which may be important for directing an immune response conjunctions the inserted epitope, and hybrid fimbriae are easy and conserved in high conjunction of the present sequence is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAB36353 standard; Protein; 151 AA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a recombinant agfA gene (1) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: sequence which encodes a foreign epitope or antigen. Also described are: the control of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) the chromosome of the directing recombinant gene into the chromosome of the pomologous species; (3) directing recombination of a recom
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Recombinant agfA gene having a segment replaced by a foreign DNA seguence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   White AP,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  05-APR-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                            back into the chromosome of the homologous species, replacing the native CC copy of that gene; and (4) eliciting an immune response in an animal, cc comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or CC anino acid sequence host cell, from the host cell and introducing the cc polymer into the animal in conjunction with a carrier or diluent (I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation CC system the heterologous antigens are presented in high numbers (up to 500,000 coples/cell), the hybrid fimbrin protein possesses both the Immunogenicity and adhesion properties relevant for an efficient live immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbrine are easy and the contribution of the contribution o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2000-672631/65.

"Global GacA-steered control of secondary metabolism in Pseudomonas fluorescens acts on specific ribosome binding sites.";

Submitted (MAR-1999) to the EMBL/GenBank/DDBJ databases.

-i- FUNCTION: THIS PROTEIN BINDS DIRECTLY TO 23S RIBOSOMAL RNA AND IS NECESSARY TO THE IN VITRO ASSEMBLY PROCESS OF THE 50S RIBOSOMAL SUBUNIT; IT IS NOT INVOLVED IN THE PROTEIN SYNTHESIZING FUNCTIONS OF THAT SUBUNIT (BY SIMILARITY).

OF THAT SUBUNIT (BY SIMILARITY).
                                                                                                                                                                                                                  This SWISS-PROT entry is copyright. "Suppression of a sensor kinase-dependent phenotype in Pseudomona syringae by ribosomal proteins L35 and L20.";

J. Bacteriol. 178:1548-1555(1996).

-i- FUNCTION: THIS PROTEIN BINDS DIRECTLY TO 23S RIBOSOMAL RNA AN NECESSARY TO THE IN VITRO ASSEMBLY PROCESS OF THE 50S RIBOSOM SUBUNIT; IT IS NOT INVOLVED IN THE PROTEIN SYNTHESIZING FUNCT OF THAT SUBUNIT (BY SIMILLARITY).
                                                                                                                                 P47880;
